## Brush Weatherguard 2A

### Weld On Installation & Drill On Installation

---

### Brush Weatherguard

- ❶ **Brush Weatherguard** can be used with any pit type dock leveler.
- ❷ **Brush Weatherguard** is an added dimension of protection for curb angles and dock boards. Two different design options of weld on or drill on can be specified for curb angle and dock board installations.
- ❸ **Brush Weatherguard's snug fitting construction keeps mother nature where you want it.**
- ❹ **Brush Weatherguard's** minimal investment provides maximum returns.

**Brush Weatherguard's** unique design allows you to change the brush insert with simple tools.

Brush Weatherguard consists of a nylon brush with a steel backing. It is assembled into an aluminum mounting channel which can either be screwed to the dockleveler or slid into a steel channel which can be tack welded to either the dockleveler or the curb angle. Compressible rear seals are available for certain makes of docklevelers.

#### **Installation procedure is simple:**

##### **Drill on Brush Weatherguard**

- Secure the aluminum mounting strip to the dock board by drilling and attaching with screws. (Not supplied).
- Slide the brush seal into position and trim to required length.
- Install rear seal.

#### **Brush Weatherguard ...**

- reduces heating and air conditioning costs
- helps keep rodents out
- helps keep dock leveler pits clean
- is easy to install and replace
- is energy conscious
