1400

FOAM DOCK SEAL
With Head Curtain

The Series 1400 Dock Seal saves energy dollars while providing airtight protection to the loading dock area during material handling operations. The Series 1400 effectively services varying height vehicles at a wide range of door heights.

The vehicle positioned at the dock compresses the resilient foam side pads, while the full width head curtain conforms to the truck, eliminating the gap between the facility and the vehicle body. This separation of interior and exterior environments allows for a safe loading dock area while ensuring employee comfort and efficiency.

The structurally supported head curtain is sloped to ensure adequate drainage while being held taut by tension straps at each end.

The airtight barrier that Fairborn dock seals provide regulates the facility's atmosphere to be free from air-borne contaminants, insects, and foul weather; while enhancing building security.

To ensure maximum durability, the Series 1400 is available in our superior performance materials. Fairborn created the first certified performance fabrics designed solely for the construction of dock seals and shelters. Our exclusive materials meet or exceed the most demanding requirements and have proven to out-perform any fabric in today's dock shelter market.

Head Curtain Options...

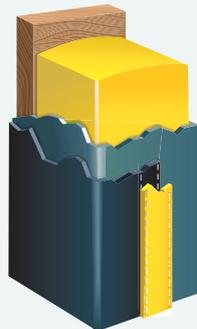

- ① **Dyna-Armor Pleats**
located at each end of the head curtain provide maximum protection from abuse caused by protruding corners at the top of the vehicle.
- ② **Splits with Pull Ropes**
enable the head curtain to be adjusted to effectively service varying height vehicles at the same opening. Hook and loop fasteners hold the verticle splits together at each position of adjustment.
- ③ **A Weighted Member**
sewn into the edge of the head curtain enhances the curtain's ability to conform to the vehicle body.
- ④ **A Foam Face**
incorporated into the head curtain's construction allows the unit to mold to the vehicle's irregularities.
- ⑤ **Face Reinforcements**
sewn in place at each end of the head curtain, further reinforce this critical wear area.

Optional Side Pad Fabric Construction...

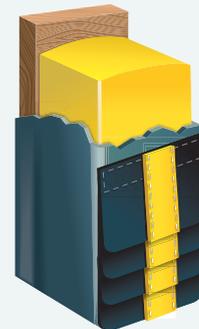

Reinforced Face

This option further reinforces the entire contact surface of the side pad for greater durability.

Reinforced Inside

Reinforcing the portion of the side pad that is exposed to the door opening, reduces the potential for damage caused by contact from a wide load.

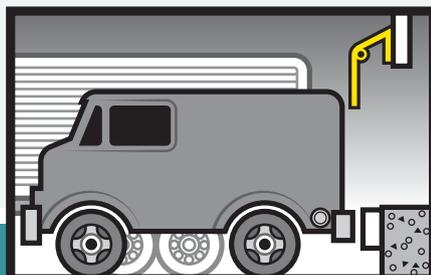

Dyna-Armor Pleats

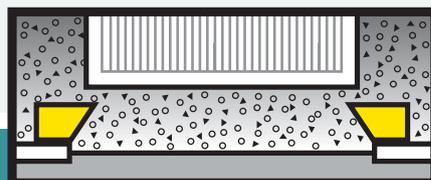

A pleat construction the full length of the side pad provides for maximum protection. This option is available in 4", 8" or 16" exposure.

A few of the many Series 1400 design options to tailor suit your requirements...

The **Curtain Length Availability** allows for the accommodation of the widest range of vehicle and door height variations.

Beveled Side Pads allow standard vehicle widths to be serviced at wider openings. The bevel profile provides for a "wiper" action, allowing for greater accessibility to the rear of the vehicle, while reducing pressure onto the facility wall.

Tapered Units provide a uniform seal when accommodating an inclined or declined drive approach. This option reduces the potential of overcompression.
